Cellflexline: Flexible, customised presentations

From simple brochure stands to shop-in-shop solutions

Cellflexline® can be used wherever people meet to gather information, discover new things or go shopping. Whether in the reception area of a company, in the office, at exhibitions and conferences or in a shop.

What sets Cellflexline® apart is:

- stylish design
- extraordinary versatility and functionality
- excellent stability and quality

The panels made from compound aluminium material are a core element of the design. Thanks to the wide range of individual components, you can put together a system to meet your needs, whether you want a simple brochure stand or to fit out a complete shop. And all this in the colours you want, complete with lighting.

The system is transported and delivered as individual components which are flat-packed and can be assembled within minutes without any tools. It can also be dismantled again at any time.

Cellflexline adapts to your requirements. With customized lettering, you direct the focus onto your brand and your product.

Cellflexline is available in the following standard dimensions:

Width 300 / 500 / 700 mm

Height 1700 mm
