

Vodafone (DE)

Among other products, Westiform has developed illuminated transparencies for the telecommunications provider Vodafone. The illuminated sign measures 10 metres in length: Several acrylic sheet panels had to be joined to create a sign of this size. Our specialists paid careful attention to ensure an aesthetically perfect and uniform surface.

The interior of the illuminated sign consists of a steel frame, to which high-performance LED modules are attached. The illuminated signs are fitted with an automatic lighting control system. The result is a pleasant lighting effect and significant energy savings.

Westiform also manufactures POS products for the interior of Vodafone shops. Around 300 points-of-sale have so far been equipped with the updated image.

An additional sophisticated product for Vodafone is a logo with a diameter of three metres. The visuals were applied with screen printing, and the shells were vacuum moulded. The pulsating drop is the centrepiece: Westiform created perfect animated graphics that precisely matched the customer's wishes. Despite its size, the system uses only 0.6 kilowatts of energy.
